Professional Summary

Senior Software Engineer and Module Lead with 6+ years of experience architecting and delivering full-stack production systems for global enterprises in healthcare, SaaS, and e-commerce. Proven track record of leading pods of 3-8 engineers to ship 10+ scalable platforms, including HIPAA-compliant solutions and multi-market DXP rollouts for Fortune 500 clients like Kenvue and PropelHealth. Expertise spans React/Next.js frontend architecture, Node.js/Python (FastAPI) backend services, and robust CI/CD pipelines. Published IEEE researcher (ICCIT 2025) on LLM security, blending deep technical execution with a security-first mindset. Passionate about driving engineering excellence and building meaningful products at scale as a Senior IC or Tech Lead.

Technical Skills

Frontend Technologies:

- TypeScript, React.js, Next.js (App Router), Redux, Context API, Tailwind CSS; Web Performance (Core Web Vitals, Lighthouse), Accessibility (WCAG/a11y)

Backend Technologies:

- Node.js (Express.js), Python (FastAPI – production-grade), RESTful APIs, GraphQL (Apollo)

AI & LLM (Research to Production):

- LLM Integration, RAG (Retrieval-Augmented Generation), Prompt Engineering, LLM Security & Jailbreak Defense

Databases & Caching:

- PostgreSQL, MongoDB, MySQL, Redis (Caching, Session Mgmt, Queues)

Cloud & DevOps:

- AWS (EC2, S3, Lambda), Docker, CI/CD (GitHub Actions), Vercel, DigitalOcean

Testing & Observability:

- Jest, React Testing Library, PyTest, Sentry, Datadog

CMS & E-Commerce:

- Contentful (Headless), WordPress, Shopify
-

Work Experience

Module Lead - Senior Software Engineer | SJ Innovation LLC | May 2019 – Present

- Architected and scaled 10+ enterprise-grade production systems (React/Next.js, Node.js, FastAPI) for Fortune 500 clients including Kenvue/Neutrogena, serving HIPAA-compliant healthcare data to thousands of daily active users.
- Drove a 30% reduction in application load times through code-splitting, image optimization, and Core Web Vitals profiling, improving user retention and SEO for flagship e-commerce properties.
- Led cross-functional pods of 3-8 engineers across simultaneous client engagements, owning the full SDLC from architecture to production deployment.
- Designed high-throughput backend services (Node.js, FastAPI) with robust REST/GraphQL API contracts, data encryption, and audit logging for HIPAA/GDPR compliance.
- Built CI/CD workflows with GitHub Actions, automating testing, linting, and canary deployments, enabling zero-downtime rollbacks for mission-critical systems.
- Scaled engineering talent through code reviews, pair programming, and retrospectives; conducted 50+ technical interviews and mentored junior engineers to own their first production features.

Software Developer (Freelance / Contract) | 2015 – 2018

- Delivered 20+ web projects for international clients as an independent consultant, managing end-to-end delivery from scoping to deployment.
-

Selected Projects

Kenvue / Neutrogena | Global DXP

Enterprise headless CMS migration across 15+ international markets

Link: <https://www.neutrogena.com/> · Stack: Next.js, Contentful

- Led frontend delivery for Kenvue's global DXP initiative, migrating Neutrogena.com to Contentful headless CMS across 15+ international markets. Coordinated with global product, content, and backend teams for zero-downtime launch while contributing to content migration strategies.

CalystaPro EMR | HIPAA-Compliant Healthcare SaaS

Production EMR system deployed across 20+ hospital networks

Link: <https://calystaemr.com/> · Stack: JavaScript, Tailwind

- Led a 3-4 engineer frontend team to revamp CalystaPro's production EMR (patient management, scheduling, forms, clinical notifications) within 3 months, coordinating backend integration while maintaining HIPAA compliance, backward compatibility, and zero data integrity incidents across thousands of daily patient records.

IELTSReady | Digital Examination Platform

Full-stack platform built for IELTS students and coaching centers

Link: <https://www.ieltsready.org/> · Stack: Next.js, Node.js, MongoDB, TypeScript

- Independently architected a full-stack IELTS examination platform (with one additional member) covering test state management, adaptive timers, automated scoring, and admin workflows, engineered for data consistency and designed to scale across coaching centers.

YearInReview | Full-Stack Productivity Platform

Personal passion project built from architecture to production

Link: <https://yearinreview.online/> · Stack: Next.js (App Router), PostgreSQL, TypeScript

- Independently designed and shipped a full-stack productivity platform for setting yearly goals and tracking milestones, owning everything from data modeling to production deployment.
-

Research & Publications

"Code Poisoning Through Misleading Comments: Jailbreaking Large Language Models via Contextual Deception" | Rajon Dey et al. · IEEE ICCIT 2025 · ieeexplore.ieee.org/document/11491067

- Designed a novel jailbreak attack via contextual comment poisoning, evaluated across GPT-4/llama/Gemini using Python-based frameworks (PyTorch, OpenAI API) to automate vulnerability testing, contributing original LLM security methodology directly applicable to regulated industries (healthcare, finance).
-

Education

- BBA (Bachelor of Business Administration), Leading University, Bangladesh – Graduated: 2017
-

Certifications

- Advanced Python (2025) · AWS Cloud Computing (2024)
-

Honors

- Recognized as Employee of the Month and Top Performer multiple times across 2020–2025.
-

Languages

- English (Professional) · Bengali (Native)
